

Create a dockerfile, docker-compose file which when executed must display your basic details in the website

#### Docker file Creation

```
root@ip-172-31-11-110:~/website/html# docker --version
Docker version 28.2.2, build 28.2.2-0ubuntu1~24.04.1
root@ip-172-31-11-110:~/website/html#
```

```
root@ip-172-31-11-110:~/website# cat docker-compose.yml

services:
  web:
    build: .
    ports:
      - "80:80"
    restart: unless-stopped
root@ip-172-31-11-110:~/website#
```

```
root@ip-172-31-11-110:~/website# cat nginx.conf
create nginx configuration file :

server {
    listen 80;
    root /usr/share/nginx/html;
    index index.html;
    location / { try_files $uri $uri/ /index.html; }
}
root@ip-172-31-11-110:~/website#
```

```
root@ip-172-31-11-110:~/website# cat dockerfile
# Use lightweight Nginx base image
FROM nginx:alpine

# Remove default nginx index page
RUN rm -rf /usr/share/nginx/html/*

# Copy your static site files into nginx html directory
COPY ./html /usr/share/nginx/html

# Expose port 80
EXPOSE 80

# Nginx runs automatically via base image's entrypoint
root@ip-172-31-11-110:~/website#
```

```
root@ip-172-31-11-110:~/website# docker-compose up -d --build
Building web
DEPRECATED: The legacy builder is deprecated and will be removed in a future release.
             Install the buildx component to build images with BuildKit:
             https://docs.docker.com/go/buildx/

Sending build context to Docker daemon  6.144kB
Step 1/4 : FROM nginx:alpine
----> d4918ca78576
Step 2/4 : RUN rm -rf /usr/share/nginx/html/*
----> Using cache
----> 869d377d8562
Step 3/4 : COPY ./html /usr/share/nginx/html
----> 210ec60d3c61
Step 4/4 : EXPOSE 80
----> Running in 77b67afde4ae
----> Removed intermediate container 77b67afde4ae
----> e410281b9378
Successfully built e410281b9378
Successfully tagged website_web:latest
Creating website_web_1 ... done
```
